

# Ideation Phase

## Define the Problem Statements

|               |                                                    |
|---------------|----------------------------------------------------|
| Date          | 19 September 2026                                  |
| Team ID       | Shaik Irshad – 238W1A4256                          |
| Project Name  | Automated Network Request Management in ServiceNow |
| Maximum Marks | 2 Marks                                            |

## Customer Problem Statement

A well-articulated problem statement allows the project team to design the ideal solution for the challenges the requester faces when raising a network service request. It captures the requester's situation, goal, obstacle, root cause and resulting emotion in a single, structured line.

### *PS-1: Manual, Inconsistent Request Submission*

| I am                                              | I'm trying to                                  | But                                                             | Because                                                                       | Which makes me feel |
|---------------------------------------------------|------------------------------------------------|-----------------------------------------------------------------|-------------------------------------------------------------------------------|---------------------|
| An employee (Requester) needing a network service | Submit a network request quickly and correctly | I must manually gather and re-enter the same details every time | There is no standardized form that captures & validates my info automatically | Frustrated          |

### *PS-2: Lack of Approval Visibility*

| I am                                                            | I'm trying to                        | But                                                    | Because                                                                | Which makes me feel |
|-----------------------------------------------------------------|--------------------------------------|--------------------------------------------------------|------------------------------------------------------------------------|---------------------|
| An employee (Requester) waiting on my submitted network request | Track my request's approval progress | I get no visibility or notification on approval status | Approvals are coordinated manually with no centralized tracking system | Anxious & Uncertain |

## Problem Statement Table

| Problem Statement (PS) | I am (Customer)                                                | I'm trying to                                  | But                                                                                                                      | Because                                                                                           | Which makes me feel   |
|------------------------|----------------------------------------------------------------|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|-----------------------|
| PS-1                   | an employee (Requester) who needs a network service            | submit a network request quickly and correctly | I have to manually gather and re-enter the same details every time, with no way to confirm the request went in correctly | there is no standardized ServiceNow form that automatically captures and validates my information | frustrated            |
| PS-2                   | an employee (Requester) waiting on a submitted network request | track the approval progress of my request      | I get no visibility or automatic notification on where my request stands                                                 | approvals are coordinated manually with no centralized system for tracking status and updates     | anxious and uncertain |

## Problem, Need & Solution Summary

**Problem:** Employees who need network-related services face a fragmented, largely manual request process where information must be collected consistently, approvals coordinated separately, and request progress is difficult to track.

**Need:** A standardized IT service request workflow is needed to collect request information, validate it, automate backend processing, and manage approval status in one system.

**Solution:** A ServiceNow Service Portal-based Network Request catalog item, connected to a custom backend table and a Flow Designer automation, that handles record creation, email notification, approval, and status updates end to end.
