Maximum Marks	2 Marks

Problem – Solution Fit Template Details:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

PURPOSE / VISION

Enable employees to raise network requests through one standardised ServiceNow Service Portal form, with automatic record creation, email notification, approval and status tracking.

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS - Employee / Requester who needs a network-related service (new or existing connection) and raises it through the Service Portal - Requester on behalf of others – can raise the request for another user (<i>Opened on behalf of</i>) - Approver – reviews the generated request and approves or rejects it	6. CUSTOMER CONSTRAINTS CC - Must have complete details ready – mobile number, connection type, total amount, payment mode and address are mandatory - Existing connections require the Existing ID - Request cannot move forward until the approver decides - Needs Service Portal access; choices are limited to defined options (New / Existing, UPI / Card)	5. AVAILABLE SOLUTIONS AS - Email / phone / paper requests – <i>Pro</i>: familiar, no setup. <i>Con</i>: inconsistent details, manual entry, no request number - Manual approval follow-up – <i>Pro</i>: direct contact. <i>Con</i>: delays, no single approval record - Manual tracking (lists / sheets) – <i>Pro</i>: simple. <i>Con</i>: manual updates, errors, no notifications	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P JOBS - Submit a network request (new or existing) in one place - Enter details once and get confirmation of receipt - Get the request approved / rejected and see the outcome PROBLEMS - Repetitive manual entry; inconsistent or missing details - Unclear approval progress; delays from manual handling	9. PROBLEM ROOT CAUSE RC - The request process is fragmented and manual – no standard form, so information is captured inconsistently - Approvals are coordinated through separate communication, with no single place to track them - No automatic record creation or notification, so the request lifecycle has poor visibility - No standard workflow linking request, approval and final status	7. BEHAVIOUR BE DIRECTLY RELATED - Opens the Network Request item on the Service Portal - Selects New / Existing (Existing ID appears for Existing) - Enters mobile number, amount, payment mode and address, then submits - Checks the confirmation email; approver approves or rejects INDIRECTLY ASSOCIATED - Follows up with the approver / support when status is unclear	
Identify strong TR & EM	3. TRIGGERS TR - Needs a new network connection or a change to an existing one - Organisation requires a formal request with approval - Directed to the Network Request item on the Service Portal - Needs to raise a request for a colleague	10. YOUR SOLUTION SL Automated Network Request Management – a scoped ServiceNow application that standardises and automates the request lifecycle: Service Portal catalog item "Network Request" with mandatory-field validation UI Policy shows Existing ID only for Existing connections; User Information variable set auto-fills email, name and phone Flow Designer flow creates a record in the custom Database Tables table (auto-number, status <i>Requested</i>), sends the email, and asks for approval - Outcome updates Approval Status to Approved or Rejected; default ACLs; low-code, no custom scripts Submit on Portal → Record + Number → Email → Approval → Status	8. CHANNELS OF BEHAVIOUR CH 8.1 ONLINE Service Portal – Network Request form (validation, dynamic Existing ID, auto-filled user details) - Email "Request has been Created" with the request number ServiceNow approval request; status on the record and Approval related list 8.2 OFFLINE - Conventional process relied on phone calls, paper forms and verbal follow-ups with the approver - Replaced by the portal request, email and in-system approval – no offline step is needed to submit or approve	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM BEFORE Uncertain if the request was submitted correctly; frustrated by repeated entry and waiting AFTER Reassured by the confirmation email; in control with clear approval status; confident
